

Regional Consistency

| | |
|----------|---|
| Question | How is today's information and collaboration going to be ensured through all authorities and ensure the consistency of this across regions? |
| Answer | January's event came about as all the 11 LAs wanted to work differently with providers, recognising that we have to work together to achieve the best outcomes across the region. How we achieve this will be through a number of different workstreams and engagement events to enable us to find the best working solutions for regional and sub-regional approaches. We have already started working on creating the regional practice principles and looking at standardising the placement request forms. Although small, these are the 1st steps in creating a one customer perspective. Data will also be key for each LA so we can start describing services and need in a consistent way. These are longer-term projects and language, and culture will form important aspects in how we cultivate the right behaviours to secure the best outcomes. |
